## **DETAILED ACTION**

### ***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance:

The Prior Art does not fairly teach or suggest the manufacturing method by micro-machining wherein at least one membrane sensing element for a pressure sensor is able to operate at high temperature to measure a pressure of a hostile medium, including the steps of (a) producing a layer of monocrystalline silicon carbide on one surface of a substrate containing polycrystalline silicon carbide, (b) fabricating, on the free surface of the monocrystalline silicon carbide layer a detection means to detect membrane deformation, (c) fabricating electric contracts on said free surface to connect the detection means to electric connection means, and (d) forming the membrane of said sensing element by removal of matter from the other surface of the substrate so as only to preserve polycrystalline silicon carbide.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
